

Battery Charge Manager

The Best Manager you can put Between your Generator and your Battery Bank

Specifications

Operating Voltage

12 or 24 volts (consult factory)

Operating Attributes

Enclosure: 3.25" wide, 3.25" high, 2.1" deep

Weight: .45 lbs.

Aluminum Case - Epoxy Sealed (black)

High/Low Pot Adjustment Range

12V systems (10-15 VDC)

24V systems (consult factory)

Delay on Timer

0 to 7 Minutes

Run Timer

0 to 8.5 hours

Run Output

5 amps. max.

Continuous Sourcing (+bat) output

Operating Humidity Range

0 to 95% non-condensing

Operating Current Draw

160 mA

Standby Current Draw

12mA

Operating VDC Limits

12V systems (4.75VDC min. - 18 VDC max.)

24V systems (consult factory)

- **Best Selling Battery Manager in the Industry**
- **Lowest Cost Manager of its Kind**
- **Longest Warranty in the Industry (3 Years)**

The Battery Control Manager from DynaGen™ will keep your batteries in top operational condition at all times. Constantly monitoring battery voltage, the Battery Control Manager will activate the engine controller or the charging system to ensure full battery bank recharging, not just a partial "surface charge" or boiling the battery dry.

The battery charge monitor has many features not found in competing products:

Delay On Timer

Prevents unnecessary starting of the system when a large instant load or draw is placed on the battery.

Run Timer

Depending on the charging rate of your alternator and the amp-hour capacity of your battery bank, running for a fixed time ensures that you can get a full recharge without overcharging.

Adjustability

The high and low set points to begin and end the charging cycle are adjustable with a range of values.

The Battery Control Manager can be preset in our factory or set in the field during installation. This provides the OEM a plug and run solution, and gives the refurbisher the ability to tailor the Manager for a specific task.
